STATEMENT OF REASONS FOR ALLOWANCE

The claims expressly recite a circuit having a series combination of capacitors and switches. The claims recite an arrangement wherein each capacitor has its “one electrode” coupled to the “input potential” by way of a respective “switch” and its “other electrode” coupled to the “output node of the drive circuit” by way of a respective switch and where the last “N” capacitor further has its “other electrode” coupled to the “input potential” by way of a “third switch circuit”. The claim further recites some expressly switching sequence for the switches circuits. The closest prior art is the references to Fowler that discloses an arrangement wherein all of the “one electrodes” of the capacitors are coupled to the “output of the driver” via switches. Since none of the cited prior art references disclose a circuit similar to that claimed, the case is in condition for allowance.
